

Introduction to Sisterna® sucrose esters

Safety and mildness are key requirements in today's personal care industry and are increasingly driving formulators to focus their interest on natural and naturally derived raw materials. But just being mild and safe is not enough: today's raw materials should meet an outstanding technological performance as well.

In Sisterna® sucrose esters these requirements are combined. Being based on sucrose and vegetable fatty acids, Sisterna® sucrose esters are a unique range of high quality, non-ionic emulsifiers with exceptional performance and mildness.

Sisterna® sucrose esters can offer other unique benefits to personal care formulations, thus offering formulators many advantages in these times of environmental consciousness.

Sisterna distinguishes itself as a flexible partner that will help to find technical solutions in the development, improvement and process optimising of personal care products.

Further guide formulations are available on request.

Business Partners

Sisterna B.V. is responsible for the supply of Sisterna® sucrose esters in Europe and the Americas and has a network of exclusive distributors in its territory.

Visit our website **www.sisterna.com** to find out more about Sisterna® sucrose esters and to find the business partner responsible for your country.

The information and recommendations in this publication are to the best of our knowledge, information and belief accurate at the date of publication. Sucrose esters as main O/W emulsifier system

Creating natural emulsions with a luxurious skin feel is a challenging task. This can be achieved with Sisterna® sucrose esters, which are excellent natural oil-in-water (O/W) emulsifiers. Furthermore Sisterna® sucrose esters provide an excellent touch and improve smoothness, emolliency and moisture level of the skin.

O/W emulsions

Sisterna® sucrose esters with a medium to high HLB value are recommended for the development of natural and mild O/W emulsions.

Advised products:

- Sisterna SP30-C/Sisterna SP70-C in a 2/2 ratio for creams
- Sisterna SP30-C/Sisterna SP70-C in a 3/1 ratio for lotions (LLC)
- Sisterna SP50-C

Benefits of Sisterna® sucrose esters in O/W emulsions

- Show very good emulsification properties with oils of different polarity, including vegetable and mineral oils, medium polarity and silicone oils
- Are suitable emulsifiers for the formation of traditional as well as lamellar liquid crystal type (LLC) emulsions
- Provide an excellent skin feel, largely independent of the oil phase
- Improve skin smoothness, emolliency and moisturisation
- Provide a cooling effect

With a combination of Sisterna SP30-C/SP70-C in a 2/2 ratio cosmetic mousses with a light texture and excellent skin feel can be prepared. An additional aerating step will be required in the production process. For more information, please contact Sisterna.

FORMULATION INFORMATION ME.010 Thai Wellness Body Butter

A rich body butter which contains more than 20% of butters and other solid ingredients. Sisterna SP30-C and Sisterna SP70-C will help to remove the greasiness of these butters and solids. This also increases the spreadability and gives a lighter skin feel.

Production method

- 1. Add the Amigel and Keltrol CG-SFT to (1) while stirring. Hydrate for 10 minutes until fully incorporated.
- 2. Heat (1) and (2) to 70°C.
- 3. Add (2) to (1) while homogenising.
- 4. Cool down to 40°C while continuously stirring and add (3) to (1+2) while homogenising shortly.
- 5. Adjust pH with (4) if necessary.

Formulation developed by Matis Specialties (Belgium) - www.matisspecialties.be

FORMULATION INFORMATION ME.015 ZnO Sun Cream SPF30

The negative sensation of ingredients on the skin, like sun filters, is eliminated by using Sisterna SP70-C and Sisterna SP30-C as the emulsifier system. They improve spreadability, skin softness and the after feel of the total formulation in a natural way.

ME.015 ZnO Sun Cream SPF30

- 10. Adjust pH if necessary.

FORMULATION INFORMATION ME.017 The LLC Lotion

Combining Sisterna SP30-C and Sisterna SP70-C in a 3/1 ratio, gives you the ability to create Lamellar Liquid Crystal (LLC) emulsions. The addition of 2% cetearyl alcohol further enhances the LLC networks. The velvet skin feel created by using sucrose esters is enhanced by the LLC emulsion, also providing a higher stability and a controlled release of actives.

Sucrose esters as co-emulsifier for O/W and W/O

Creating natural emulsions with a luxurious skin feel is a challenging task. Sisterna® sucrose esters are excellent natural co-emulsifiers for both oil-in-water (O/W) and water-in-oil (W/O) skin care emulsions. Furthermore Sisterna® sucrose esters provide an excellent touch and improve smoothness, emolliency and moisture level of the skin.

O/W emulsions

Sisterna® sucrose esters with a high HLB value are recommended for the development of O/W emulsions.

Advised products:

 Sisterna SP70-C as co-emulsifier with a low HLB food emulsifier, such as glycerylstearate citrate or glyceryl monostearate

Benefits of Sisterna® sucrose esters in O/W emulsions:

- Show very good emulsification properties with oils of different polarity, including vegetable and mineral oils, medium polarity and silicone oils
- Are suitable emulsifiers for the formation of traditional as well as lamellar liquid crystal type emulsions
- Provide an excellent skin feel, largely independent of the oil phase
- Improve skin smoothness, emolliency and moisturisation
- Provide a cooling effect

W/O emulsions

Sisterna® sucrose esters with a low HLB value are recommended for the development of W/O emulsions.

Advised products:

Sisterna SP01-C or Sisterna SP10-C as co-emulsifier

Benefits of Sisterna® sucrose esters in W/O emulsions:

- Improve the spreading and after skin feel properties of the emulsion
- Eliminate the oily/greasy sensation typical of W/O emulsions

FORMULATION INFORMATION CoE.008 Las Vegas Protection Cream

Sisterna SP70-C can be used as a natural co-emulsifier for O/W emulsions. It improves the skin feel and increases the mildness of a formulation. Dosing Sisterna SP70-C only as a co-emulsifier is also a good way of using the benefits more economically for mass market products.

- 1. Mix the ingredients of (1).
- 2. Add (2) to (1).
- Add (3) to the surface of (1+2). Wait until the powder is fully hydrated, mix thoroughly until completely dissolved.
- 4. Heat (1+2+3) to 70°C while stirring.

- 5. Mix the ingredients of (4) and heat to 70°C while stirring.
- 6. Add (4) to (1+2+3) and homogenise.
- 7. Cool down to 40°C while stirring gently.
- 8. Add (5, 6, 7) separately.
- 9. Cool down to room temperature while stirring.

FORMULATION INFORMATION CoE.009 Arctic Protection Cream

Dosing Sisterna SP01-C in this heavy duty W/O cream, improves the spreading properties, eliminates the oily or greasy sensation and enhances the after skin feel. It makes the total cream feel like a rich O/W emulsion. The addition of Sisterna A10E-C increases viscosity and improves the sensorial aspect of the final formulation.

Sucrose esters as cold emulsifier for O/W

Cold process emulsifiers are becoming increasingly popular as a way of reducing costs and obtaining a greener production method. Sisterna® sucrose esters are excellent emulsifiers for cold process oil-in-water (O/W) emulsions. Furthermore Sisterna® sucrose esters provide an excellent touch and improve smoothness, emolliency and moisture level of the skin.

O/W emulsions

Sisterna® sucrose esters with a high HLB value are recommended for the development of cold process O/W emulsions.

Advised products:

- Sisterna SP70-C Best option
- Sisterna PS750-C Good alternative

Benefits of Sisterna® sucrose esters in cold process O/W emulsions:

- Show very good emulsification properties with oils of different polarity, including vegetable and mineral oils, medium polarity and silicone oils
- Easy to use
- Safe and mild
- Provide an excellent skin feel, largely independent of the oil phase
- Improve skin smoothness, emolliency and moisturisation
- Provide a cooling effect

FORMULATION INFORMATION CE.004 Cold Process Moisturising Cream

Simple and effective formulation with Sisterna SP70-C, showing which maximum viscosity you can achieve with this cold production concept. Sucrose esters decrease the oily sensation of oils and therefore up to 60% can be dosed to create a cream. Adjusting the oil phase with light oils will even further improve this concept to a gentle cream. Tips and tricks to achieve the highest viscosity: take a close look at the thinning behaviour of preservatives and perfumes!

- 1. Premix the Actigum VSX 20 and Xilogel HS into the glycerin (1).
- 2. Disperse the premix (1) in the aqueous phase (2) while homogenising for 20 minutes.
- 3. Add the pigment (3) to phase (1+2) and homogenise.
- 4. Mix the oil phase (4) in given order and homogenise.
- Add phase (5) separately to (4) while stirring, until the pigments are fully dispersed and the phase is homogenous.
- 6. Add phase (4+5) into phase (1+2+3) while homogenising.
- 7. Adjust the pH if necessary.

FORMULATION INFORMATION CE.006 Light Cream-to-Oil

A gentle cream with a high percentage of light oils that gives a balanced oily sensation when applying it. This ensures a long playtime and a nice feeling of skin moisturisation, which is also a result of using Sisterna SP70-C.

CE.006 Light Cream-to-Oil

ID : Cold emulsification / CE.006

pH-value : 5.41

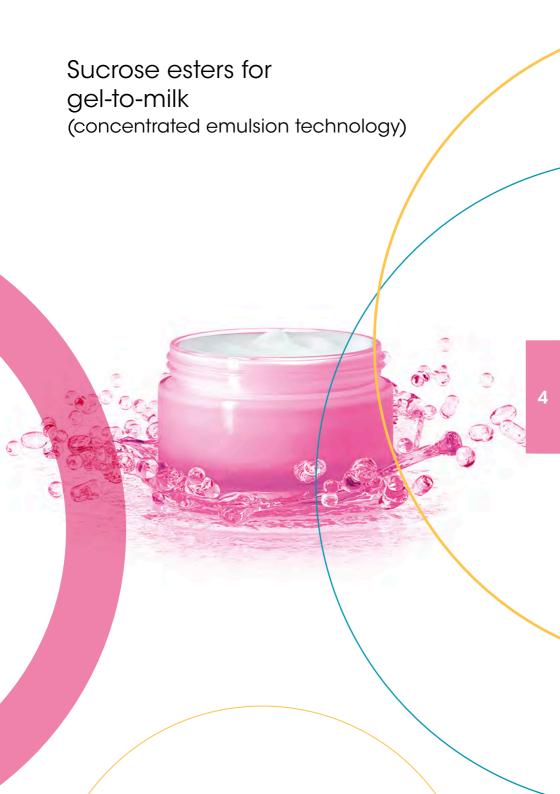

Viscosity : 16.200 mPa.s Brookfield DV2T, Spindle 93, 5 rpm

- 1. Disperse the Clearogel SG and Xanthan Gum into the glycerin while stirring.
- 2. Add the dispersion (1) into the water with preservative while stirring with a high shear mixer for 10 minutes.
- 3. Mix (2) in given order and homogenise until Sisterna SP70-C is well dispersed into the oil.
- 4. Add (2) into (1) while homogenising.
- 5. Adjust pH with (3) if necessary.

Sucrose esters for gel-to-milk concepts (concentrated emulsion technology)

Concentrated emulsion technology for gel-to-milk concepts Sisterna® sucrose esters with a high HLB value are recommended for the development of oil-in-glycerin (O/G) concentrated emulsions, with the aspect of an oil gel turning into milk when diluted with water upon use.

Advised products:

- Sisterna SP70-C Best option
- Sisterna PS750-C Good alternative

Additional concept information:

- The optimum ratio of oil/glycerin is between 30/70 and 60/40
- To decrease the viscosity, the oil phase can be reduced to 30% as a maximum
- Combine Sisterna SP70-C or Sisterna PS750-C with Sisterna L70-C as an alternative to decrease viscosity
- Standard homogenisation equipment is used
- Transparent emulsions can be obtained by matching refractive indices of oil and glycerin phase
- Best emulsion stability is obtained with vegetable oils, caprylic/capric triglyceride

FORMULATION INFORMATION GE.013 Oil-Gel to Milk Cleanser

A high viscous facial cleanser, still suitable for an airless dispenser, that turns into a milk on the skin when in contact with water. A good product to remove make up which leaves a velvet-like after feel on the skin.

GE.013 Oil-Gel to Milk Cleanser

ID : Gel-to-milk / GE.013 **pH-value** : Not Applicable

Viscosity : 151.800 mPa.s Brookfield DV2T, Spindle 93, 5 rpm

Product form: Gel-to-milk

	Ingredient	INCI-name	% w/w	Supplier
1	Glycerin 99%	Glycerin	37.70	several
	Sisterna SP70-C	Sucrose Stearate	2.00	Sisterna

Production method

- 1. Disperse Sisterna SP70-C into the glycerin (1) and heat up to 70°C.
- 2. Mix the ingredients of the oil phase (2) in given order and heat up to 75°C.
- 3. Add (2) to (1) slowly while homogenising.
- 4. Cool down to 35 $^{\circ}$ C and add the ingredients of (3) to (1+2) while stirring.

FORMULATION INFORMATION GE.015 Delicate Sandy Scrub

Gel-to-milk formulations with a high viscosity are a perfect basis for an exfoliant scrub. In this case a fine and sand-like scrub particle has been dosed giving a gentle scrub sensation. The combination of the subtle scrub experience and the typical skin feel of a gel-to-milk formulation creates a silky soft after feel.

GE.015 Delicate Sandy Scrub

ID : Gel-to-milk / GE.015

pH-value : N/A

Viscosity : 244.400 mPa.s Brookfield DV2T, Spindle 94, 5 rpm

Production method

- 1. Disperse Sisterna SP70-C into the glycerin (1) and heat up to 70°C.
- 2. Mix the ingredients of the oil phase (2) in given order and heat up to 75° C.
- 3. Add (2) to (1) slowly while homogenising.
- 4. Cool down to 35 $^{\circ}$ C and add the ingredients of (3) to (1+2) while stirring.

Sucrose esters for spray/wipe and serum concepts (concentrated emulsion technology)

Concentrated emulsion technology for spray and wipe concepts

Thin liquid oil-in-water emulsions with very small droplet sizes of 0.3 micrometer can be obtained when producing via a simple intermediate concentrated oil-in-glycerin (O/G) emulsification step. The O/G emulsion is then diluted with water to a final spray or wipe formulation.

Advised products:

- Sisterna SP70-C Best option
- Sisterna PS750-C Good alternative

Additional concept information:

- The optimum ratio of oil/glycerin is 50/50
- · Standard homogenisation equipment is used
- · After emulsification the emulsion is diluted with water containing a stabiliser

Serum formulations

Due to the very small droplet sizes of 0.3 micrometer, this is also an excellent production method for making serums with a high skin penetration. The serums can require a higher viscosity than the spray and wipe concepts.

Additional concept information:

- Equal production method compared to making spray/wipe emulsions
- Increasing the intermediate oil-in-glycerine phase and reducing the water phase increases the viscosity needed for a serum
- By selecting the right hydrocolloids, viscosity can be increased further

FORMULATION INFORMATION SE.008 Conditioning Spray

With an oil-in-glycerin intermediate phase, sprayable formulations can be made without using ethoxylated emulsifiers. Stable emulsions with oil droplets of 0.3 micrometer are made with an oil concentration as low as 5%.

SE.008 Conditioning Spray

ID : Spray & Wipe / SE.008

pH-value : 5.46

Viscosity : 2.200 mPa.s Brookfield DV2T, Spindle 93, 5 rpm

Product form : O/W Spray

	Ingredient	INCI-name	% w/w	Supplier

Production method

- 1. Disperse Sisterna SP70-C into the glycerine (1).
- 2. Mix ingredients of (2) in given order.
- 3. Add (2) to (1) and homogenise with a high shear mixer for 1 minute.
- 4. Add Avicel PC611 to the water of (3) and shear for 10 minutes with a high shear mixer.
- 5. Add oil-in-glycerin emulsion (1+2) to (3) while mixing.
- 6. Add (4) and adjust pH 6,5 with Citric Acid if necessary.

FORMULATION INFORMATION SE.009 Nourishing Body Spray

Sprayable formulations with an oil phase of 12% can be obtained by producing with an oil-in-glycerin intermediate phase. No ethoxylated emulsifiers need to be used and oil droplets of 0.3 micrometer are created. Having a higher oil phase will mean that the lotion will be a little more viscous, but depending on the spray packaging it can be a perfectly sprayable formulation.

SE.009 Nourishing Body Spray

ID : Spray & Wipe / SE.009

pH-value : 5.41

Viscosity : 3.000 mPa.s Brookfield DV2T, Spindle 91, 5 rpm

Production method

- 1. Disperse Sisterna SP70-C into glycerin (1).
- 2. Mix ingredients of (2) separately.
- 3. Add (2) to (1) and homogenise with a high shear mixer for 1 minute.
- 4. Add Avicel PC611 to the water of (3) and shear for 10 minutes with a high shear mixer.
- 5. Add oil-in-glycerin emulsion (1+2) to (3) while mixing.
- 6. Add (4) and adjust pH 6,5 with Citric Acid if necessary.

FORMULATION INFORMATION SE.010 The Concentrated Serum

Making an emulsion with an oil-in-glycerin intermediate emulsification step enables the formation of droplet sizes of 0.3 micrometer. This production method is excellent for dosing oil actives which will be boosted as a result of this better skin penetration, creating extremely effective serums.

SE.010 The Concentrated Serum

ID : Serum / SE.010

pH-value : 6.60

Production method

- 1. Disperse Sisterna SP70-C into the glycerin (1) and heat until 70°C.
- 2. Heat (2) separately to 70°C.
- 3. Add (2) to (1) and homogenise with a high shear mixer for 1 minute.
- 4. Slowly add the Bentone Hydroclay 700 to the water under medium shear. Then mix at the highest possible shear for 10 minutes.
- 5. Add oil in glycerin emulsion (1+2) to (3) while mixing.
- 6. Adjust pH if necessary with (4).

Cold process production method is optional.

Sucrose esters for mild cleansing

Water based systems

In the development of body and hair cleansing formulations non-ionic surfactants are added to blends of traditional foaming anionic and amphoteric surfactants to improve mildness. Sisterna® sucrose esters are non-ionic and EO-free surfactants and their interesting and innovative properties make them excellent candidates for this type of products.

Advised products:

- Sisterna L70-C
- Alternatively Sisterna PS750-C or Sisterna SP70-C for non-transparent systems

Benefits of Sisterna® sucrose esters in mild cleansing:

- Reduce the irritating properties of anionic surfactants
- Considerably improve the sensorial properties of the formulations, in terms of skin feel and skin mildness
- Emulsify lipids into the cleansing formulation
- Contribute to the conditioning effect in shampoo and conditioners
- Increase viscosity at lower electrolyte concentrations

FORMULATION INFORMATION MC.006Traveller Cleansing Powder

A waterless formulation which is suitable for the frequent traveller. Wet your hands and add a little bit of powder for a good cleansing sensation. Sisterna SP70-C increases the mildness, improves the skin feel and gives a creamy effect in this formulation.

Sucrose esters in anhydrous systems

Sisterna A10E-C is a special sucrose ester grade, obtained by the esterification of sucrose with stearic, palmitic fatty acids and acetic acid. Due to its high degree of esterification, Sisterna A10E-C no longer has surface active properties, resulting in a completely different behaviour compared to all other Sisterna grades. Sisterna A10E-C can be considered as a so called 'sugar wax', which can be used as lipidic phase modifier to influence the rheological and sensorial properties of oils and natural butters.

Advised products:

· Sisterna A10E-C as lipidic phase modifier

Benefits of Sisterna A10E-C in anhydrous systems:

- Thickens or gels many oils as well as silicone oils
- Helps reducing blooming and sweating of sticks when oils that are easily thickened by Sisterna A10E-C are dosed inside the formulation
- Improves the sensorial properties
- Improves cohesion of sticks
- Reduces brittleness of sticks
- Excellent binding properties in compact powders

FORMULATION INFORMATION AS.004 Natural Cream-to-Powder Blush

Sisterna A10E-C makes the balm stronger but also more bendable, making it less easy to break. The amount of waxes with a high melting point can be reduced and sensorial properties are improved. It also improves the spreadability, because Sisterna A10E-C enables the formula to melt near skin temperature. Furthermore it helps reducing blooming and sweating of sticks.
